Lebanon Pro features LSN (Lebanon Stabilized Nitrogen) Technology. When untreated urea isn't immediately watered in after application, it begins to lose nitrogen into the atmosphere as ammonia gas due to absorbing moisture from the air. LSN (LebanonTurf Stabilized Nitrogen) significantly reduces the amount of nitrogen that escapes for up to ten days by inhibiting the enzyme, urease, that converts urea into ammonia gas and ammonium. Three days after applying one pound nitrogen, the untreated urea has already lost approximately 20% into the atmosphere. While the LSN treated urea remains largely intact, waiting to be watered into the soil profile so it can be converted into ammonium plant food.

NOTE: Coverages based on typical usage. Please refer to product labels for full rate information.
